SOUND TRANSMISSION LOSS TEST REPORT NO. TL18-197

CLIENT: ClarkDietrich

9050 Centre Pointe Drive, #400 West Chester, Ohio 45069 TEST DATE: 28 February 2018 19 March 2018

INTRODUCTION

The test was performed in accordance with ASTM E 90-09 (2016), *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions* and ASTM E2235-04 (2012), *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods*. Copies of the test standard are available at <u>www.astm.org</u>. The test chamber source and receiving room volumes are 204 and 148.4 cubic meters respectively. Western Electro-Acoustic Laboratory is accredited by the United States Department of Commerce, National Institute of Standards and Technology under the National Voluntary Accreditation Program (NVLAP) Lab Code 100256-0 for this test procedure. This test report relates only to the item(s) tested. This report must not be used to claim product certification, approval, or endorsement by WEAL, NVLAP, NIST or any agency of the federal government.

DESCRIPTION OF TEST SPECIMEN

The test specimen was a single stud wall assembly constructed from 92 mm (3-5/8 inch) ClarkDietrich ProSTUD[®] 25 (25-gauge EQ) steel studs with 92 mm (3-5/8 inch) ClarkDietrich ProTRAK[®] 25 (25-gauge EQ) steel track, Johns Manville R-11 unfaced fiberglass insulation in the stud cavities, ClarkDietrich Acoustical Clips with 22 mm (7/8 inch) ClarkDietrich 25-gauge hat channel, and USG Sheetrock[®] Brand Firecode[®] Type 'X' gypsum board.

TEST CONFIGURATION

Source Room Layers	Source Room Resilient Clip	Stud Configuration	Receiving Room Layers		
		92 mm (3-5/8 inch)			
1 layer	ClarkDietrich Acoustical	ClarkDietrich ProSTUD [®] 25	2 layers		
16 mm (5/8 inch)	Clips with	(25-gauge EQ) steel studs with	16 mm (5/8 inch)		
USG Sheetrock [®] Brand	22 mm (7/8 inch)	92 mm (3-5/8 inch) ClarkDietrich	USG Sheetrock [®] Brand		
Firecode [®] Type 'X'	ClarkDietrich 25-gauge hat	ProTRAK [®] 25 (25-gauge EQ) steel	Firecode [®] Type 'X'		
gypsum board	channel	track with Johns Manville R-11	gypsum board		
		unfaced fiberglass insulation			

- The 92 mm (3-5/8 inch) ClarkDietrich ProSTUD[®] 25 (25-gauge EQ) steel studs were spaced 406 mm (16 inches) on center (O.C.) and screwed into the ClarkDietrich ProTRAK[®] 25 (25-gauge EQ) steel track with 12 mm (1/2 inch) truss screws. Johns Manville R-11 unfaced fiberglass insulation was installed in the stud cavities. The frame was isolated from the test opening with 6 mm (1/4 inch) neoprene pads.
- On the source side, ClarkDietrich Acoustical Clips were screwed to the studs using 38 mm (1-1/2 inch) #8 screws. The clips were installed 152 mm (6 inches) from the top and bottom of the wall with a maximum spacing of 1219 mm (48 inches) O.C. laterally and a maximum spacing of 610 mm (24 inches) vertically.
- On the source side, 22 mm (7/8 inch) ClarkDietrich 25-gauge hat channel was installed into the sound isolation clips.
- On the source side, one layer of 16 mm (5/8 inch) USG Sheetrock[®] Brand Firecode[®] Type 'X' gypsum board was screwed to the hat channel using 25 mm (1 inch) long #6 drywall screws spaced at 203 mm (8 inches) O.C. along the channel.

SOUND TRANSMISSION LOSS TEST REPORT NO. TL18-197

CLIENT: ClarkDietrich

9050 Centre Pointe Drive, #400 West Chester, Ohio 45069 19 March 2018

TEST DATE: 28 February 2018

- On the receiving side, two layers of 16 mm (5/8 inch) USG Sheetrock[®] Brand Firecode[®] Type 'X' gypsum board was screwed to the studs. The first layer was screwed using 25 mm (1 inch) long #6 drywall screws spaced at 406 mm (16 inches) O.C. at the perimeter and in the field. The second layer was screwed using 41 mm (1-5/8 inch) long #6 drywall screws spaced 406 mm (16 inches) O.C. along the perimeter and in the field with screws offset 203 mm (8 inches) from the first layer.
- All gypsum board was oriented vertically, and the joints were staggered on opposite sides. All the gypsum board joints were sealed with a bead of latex caulking and metal foil tape. All screw heads were covered with metal foil tape.
- On both sides around the perimeter of the assembly, a 6 mm (1/4 inch) gap was maintained and sealed with a bead of latex caulking and metal foil tape.
- The overall dimensions of the wall assembly were 2.44 m (96 inches) wide by 2.44 m (96 inches) high by 181 mm (7-1/8 inches) thick.
- The overall weight of the assembly was estimated to be 212 kg (467 lbs.) for a calculated surface density of 35.6 kg/m² (7.3 lbs./ft²).

RESULTS OF THE MEASUREMENTS

One-third octave band sound transmission loss values are plotted and tabulated on the attached sheet. ASTM minimum volume requirements are met at 80 Hz and above. The Outdoor-Indoor Transmission Class rating determined in accordance with ASTM E 1332-10a was OITC-42. The Sound Transmission Class rating determined in accordance with ASTM E 413-10 was STC-60.

Approved:

Stephen A. Martin, Ph.D., P.I Laboratory Director

Respectfully submitted, Western Electro-Acoustic Laboratory

Chris Kezor

Acoustical Test Engineer
