## Extended FastClip™ Slide Clip

### Curtain Wall/Bypass

### Vertical building movement up to 3," and commonly used for large standoff conditions.

ClarkDietrich FCEC deflection clips are used to attach exterior curtain wall studs to the building structure and provide for vertical building movement independent of the cold-formed steel framing. The clips are available in standard lengths of 6," 8," 10" and 12" and are ideal for medium to larger standoff conditions. Extended FastClip<sup>TM</sup> deflection clips install quickly with screws, welds or powder-actuated fasteners, and provide adjustable standoff to ensure a plumb wall plane. Proprietary Deflection Screws are provided with each clip to ensure friction-free sliding.

### MATERIAL SPECIFICATIONS

Gauge: 14 gauge (68mils)

Design Thickness: 0.0713 inches

Coating: G90

Yield Strength: 50ksi ASTM: A653/A653M

#### PRODUCT DIMENSIONS

6" Extended FastClip: 1-7/8" x 6" x 4-3/4" 8" Extended FastClip: 1-7/8" x 8" x 4-3/4" 10" Extended FastClip: 1-7/8" x 10" x 4-3/4" 12" Extended FastClip: 1-7/8" x 12" x 4-3/4"

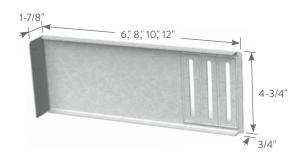

### **ALTERNATIVE PRODUCTS**

Fast Strut™

Universal Bypass Clip

#### **INSTALLATION**

Connections to the building can be made with screws, welds, powder-actuated fasteners or drill-in concrete anchors. Mechanical fasteners shall be located on the embossed marks given on the scored line of the 1-7/8" flange. Three Proprietary Deflection Screws are used to attach the clip to the cold-formed steel framing. Screws shall be driven through the slotted holes and positioned to allow for the appropriate building deflection.

#### Notes:

- 1 The 1/3 stress increase for wind shall not be used.
- 2 Attach building anchors to the structure according to the manufacturer's instructions. Anchors shall be installed through the embossments on the scored line of the clip as shown to the right. In no case shall anchors be installed more than 3/4" from the bend on the short leg of the clip. In cases of discrepancy between this information and the design engineer's details, the design engineer's details shall be followed.
- 3 It is the responsibility of the design professional to detail the project drawings for proper clip installation.
- **4** For connections to concrete, or other technical assistance, contact ClarkDietrich at 888-437-3244.

#### Notes:

- 1 Tabulated allowable loads do not include a 1/3 stress increase for wind.
- 2 \* Allowable capacity includes 1/8" service load limit.

- 3 # Allowable capacity does not include 1/8" service load limit.
- $\textbf{4} \ \, \text{Allowable weld capacities were calculated by assuming 3} \times 1" \ long \ welds \ at \ the \ ends \ and \ center \ of \ the \ clip \ bend.$
- 5 Listed weld capacities were calculated assuming an E60XX electrode.
- 6 Mechanical fasteners should be attached to the structure in accordance with the manufacturer's instructions. All fasteners were assumed to be installed at a distance of 3/4" from the bend of the structural leg.
- 7 Generic fastener capacities were calculated by considering clip-stud interaction, behavior of clip in tension and compression only. The design professional has to detail for clip and desired fastener installation.
- 8 n Number of generic mechanical fasteners required for connection to be determined by a design professional. Capacity should not exceed tabulated allowable loads.
- 9 Ultimate clip capacities were tabulated for the purpose of blast loads and they do not assume a safety factor.
- 10 Ultimate clip capacities were calculated by assuming  $3 \times 1^{\circ}$  long weld at the structural leg of the clip (clip bend) welded to  $3/16^{\circ}$  steel.
- 11 It is the responsibility of the design professional to detail the project drawings for proper clip and fastener installation.
